

Rated entity:

Class A 2016-1 Floating Rate Asset Backed Notes [with ISIN: XS1419840043] and Class B 2016-1 Floating Rate Asset Backed Notes [with ISIN: XS1419839896] issued by Driver UK Master S.A., acting for and on behalf of its Compartment 3

Rating:

Class A 2016-1 Floating Rate Asset Backed Notes: AAA_{sf}

Class B 2016-1 Floating Rate Asset Backed Notes: A+_{sf}

Rating outlook / watch:

Outlook stable

Rating summary:

Following the renewal on 27 September 2021, Creditreform Rating has confirmed the ratings of the Class A and Class B Notes of Driver UK Master S.A., acting for and on behalf of its Compartment 3 (DUKM C3), as follows:

GBP 401,000,000 Class A 2016-1 Floating Rate Asset Backed Notes: AAA_{sf}/ stable

GBP 55,000,000 Class B 2016-1 Floating Rate Asset Backed Notes: A+_{sf}/ stable

The transaction is a securitisation of auto financing contracts in UK, originated by Volkswagen Financial Services (UK) Limited (VWFS). DUKM C3 is secured by new and used vehicle financing contracts. The revolving period will expire in September 2022. The structure allows for term-takeout, tap-issuance and extension of the revolving period. A combination of Subordinated Loan and overcollateralisation provides credit enhancement to the rated Class A and Class B Notes.

As of September 2021, the securitised asset pool amounts to GBP 609.89m with 25,744 financial contracts. The Class A and B Notes represent 65.75% and 9.02% of the outstanding discounted receivables balance, respectively. Credit enhancement to the Notes is provided by a Subordinated Loan (11.68%), overcollateralisation (13.55%), and a cash reserve amounting to 0.90% of the outstanding discounted receivables balance. Since the last renewal in November 2020 the overcollateralisation level of the Class A Notes increased from 33.61% to 34.25%, while the credit enhancement level of the Class B Notes increased from 24.50% to 25.23%.

To size the credit risk, the voluntary termination risk and the residual value risk of the portfolio and to derive base case assumptions about loss rates and expected recovery performance, Creditreform Rating used data provided by VWFS as well as internal databases. Following the updated analysis of historical data, CRA set the base case gross loss rate at 0.73% and the base case recovery rate at 78.48%.

Depending on the specific rating scenarios (AAA_{sf} and A+_{sf}), the stress multiples for default rates were set at x6.92 and x4.75, respectively. Moreover, CRA set the recovery haircuts at 70.66% and 56.61%, respectively, taking into account transaction-specific features such as observed volatility and established recovery procedures, as well as potential market value risks. This resulted in expected net losses of 3.86% and 2.27% in the relevant AAA_{sf} and A+_{sf} rating scenarios. The total VT risk was sized at 3.35% and 2.50%, respectively.

With a total PCP share of 82.81%¹, residual value risk is a major risk factor in the current transaction. Historically, monthly turn-ins of PCP contracts have been limited; Creditreform therefore set the assumed turn-in rates at approximately 100% (AAA_{sf}) and 83.33% (A+_{sf}) in the relevant rating scenarios, respectively. Base-case PCP recoveries were analysed on a monthly aggregate basis and sized at 64.62% (AAA_{sf}) and 71.54% (A+_{sf}) of the contractual RV. Considering lower recovery rates of returned Porsches, we reduced the base-case recoveries for the share of Porsche PCP contracts (64.80%¹) by 20%, reflecting their overall weaker PCP recovery performance. To address a further potential decline in market values, an additional 5% haircut was applied, resulting in stressed PCP recoveries of 49.11% (AAA_{sf}) and 54.37% (A+_{sf}) for Porsche and 61.39% (AAA_{sf}) and 67.96% (A+_{sf}) for the remainder of the portfolio.

The exposure to RV risk was further stressed by assuming an increase in the total share of PCP contracts during the revolving period due to replacements of the revolving portfolio, increasing the share up to 85.88%. Taking into account the PCP balloon share of 73.61%¹, the resulting PCP exposure of 63.22% translated into a total RV risk assumption of 26.35% (AAA_{sf}) and 19.74% (A+_{sf}), respectively.

Stressed prepayment assumptions were set at 9.07% (AAA_{sf}) and 10.50% (A+_{sf}) for each rating scenario, respectively. These scenario-specific assumptions were tested in CRA's proprietary cash flow model, which was tailored to reflect the structure of DUKM C3 and to assess the Issuer's ability to service its debt in a full and timely manner.

¹ The figure is based on the June month-end data.

Primary key rating driver:

- + Proven origination, servicing & recovery procedures
- + Downgrade collateral and replacement provisions mitigate counterparty risk exposure w.r.t. the Swap Counterparty and Account Bank
- Potentially indirect negative impact of VWAG NOx emission allegations on future portfolio performance
- Concentrated geographical (Northern Ireland and South East England), contractual (Personal Contract Purchase) and vehicle type (Porsche) portfolio composition
- Extended 12-month revolving period may adversely affect portfolio quality
- Macroeconomic uncertainty ("Brexit" and the COVID-19 pandemic) and potential market decline may have adverse effect on VWFS's ABS strategy and future portfolio performance

Rating sensitivities:

Best-case scenario: In this scenario, we stressed (ceteris paribus) the base case default rate by an amount of -25% and the base case recovery rate by an amount of +25%, resulting in a rating of AAA_{sf} and A+_{sf} for the Class A and B Notes, respectively.

Worst-case scenario: In this scenario, a severe 100% stress is applied to the base case default rate in combination with a 50% stress on the base case recovery rate and the VT and RV losses, respectively, resulting in a rating of A_{sf} and BBB_{sf} for the Class A and B Notes, respectively. In our view, this rating would represent a scenario with higher default correlation and market decline in a stressed pandemic scenario.

ESG-criteria:

CRA generally takes ESG-relevant factors (environmental, social and governance) into account when assessing the rating object. Overall, ESG factors have a mild impact on the current ratings of the Class A and Class B Notes. Nevertheless, CRA identifies macroeconomic factors (particularly with regard to potential changes in consumer behaviour) to have a high significant impact on the stability of the ratings. Macroeconomic uncertainty ("Brexit" and the COVID-19 pandemic) and potential market decline may have adverse effect on VWFS's ABS strategy and future portfolio performance. Governance is relevant to the ratings with respect to counterparty risk, but downgrade collateral and replacement provisions mitigate counterparty risk exposure with respect to the Swap Counterparty and Account Bank. Other individual factors with a potential key rating influence were not identified, and therefore did not affect the final rating.

On the subject of ESG (environment, social and governance), Creditreform Rating AG has published the basic document ("The Impact of ESG Factors on Credit Ratings"), which is available on the homepage under the following link:

Endorsement:

Creditreform Rating did not endorse the rating according Article 4 (3), CRA-Regulation.

Regulatory requirements:

In 2011 Creditreform Rating AG was registered within the European Union according to EU Regulation 1060/2009 (CRA-Regulation). Based on the registration Creditreform Rating AG (CRA) is allowed to issue credit ratings within the EU and is bound to comply with the provisions of the CRA-Regulation.

Conflict of Interests

No conflicts of interest were identified during the rating process that might influence the analyses and judgements of the rating analysts involved or any other natural person whose services are placed at the disposal or under the control of Creditreform Rating AG and who are directly involved in credit rating activities or approving credit ratings and rating outlooks. In case of providing ancillary services to the rated entity, CRA will disclose all ancillary services in the credit rating report.

Rules on the Presentation of Credit Ratings and Rating Outlooks

The approval of credit ratings and rating outlooks follows our internal policies and procedures. In line with our policy "Rating Committee," all credit ratings and rating outlooks are approved by a rating committee based on the principle of unanimity. To prepare this credit rating, CRA has used following substantially material sources:

1. Transaction structure and participants
2. Transaction documents
3. Issuing documents
4. Other rating relevant documentation

There are no other attributes and limitations of the credit rating or rating outlook other than displayed on the CRA website. Furthermore, CRA considers the quality and extent of information available on the rated entity as satisfactory. In regard to the rated entity Creditreform Rating AG regarded available historical data as sufficient.
